## CAR DEALERSHIP

### MIRIS

A car dealership wants to protect its fleet of new vehicles to prevent their degradation and theft.

#### CONSTRAINTS TO TAKE INTO ACCOUNT

The entire surface of the car park is exploited: the cars installed are numerous and occupy all the space. They are often placed very close to the fence, which is why a solution with a low footprint is needed. Finally, the brand's flags on the dealership create unwanted alarms. We must therefore favor a solution that surrounds the site.
