

INTERGOVERNMENTAL
ORGANIZATION

MAXIRIS 3100

Key figures

15
days of installation

14
infrared columns

2
technicians

480 m
secure perimeter

An intergovernmental organization equipped with Infrared Barriers wishes to renew its fleet to guarantee maintenance durability.

CONSTRAINTS TO TAKE INTO ACCOUNT

During the entire installation, it is imperative for the customer that the perimeter detection remains operational and functional.

On this site, there are also constraints of interoperability of the access system to be taken into account, it is necessary to be able to dialogue natively that is to say without adding material or specific adaptation with different control manufacturers video access and hypervisor such as TIL TECHNOLOGIE, MILESTONE, GENETEC.

OUR SOLUTIONS

Active infrared barriers : MAXIRIS 3100

which makes it possible to densify the number of infrared cells and to control the height of the low beams. MAXIRIS also has a zoning function allowing optimized camera control and up to 3 configurable length detection zones.
