

PRISON

APIRIS

The French prison administration wanted to detect intrusions on a sloped Gutter zone in order to monitor access to the perimeter wall as well as to prevent any objects thrown from the outside into the prison. It also wanted to protect the walkways.

CONSTRAINTS TO TAKE INTO ACCOUNT

One essential aspect was keeping unwanted alarms to a minimum whilst also ensuring the highest level of detection.

OUR SOLUTIONS

- **Active infrared barriers : APIRIS & MAXIRIS**
In order to implement an immaterial barrier and, thus, detect any attempt to cross it.
- **Buried microwave cables : TALPA**
In order to ensure detection at the Gutter-zone.
