120 770m²
for the first site

158 000 m²
for the second site

A medicinal marijuana grower wanted to protect two sites where 100,000 plants are grown with a view to detecting any intrusions. The goal was to protect the greenhouses against theft and sabotage.

CONSTRAINTS TO TAKE INTO ACCOUNT

To meet this need, it was necessary to take into account the large perimeter as well as the hot and humid environment.

OUR SOLUTIONS

- **Active infrared barrier : Miris Connect**
Creates an immaterial wall of infrared and forms a secure dynamic radio mesh network to communicate the alarms.
