

TRUCK STORAGE

G-FENCE 600Z, BIRIS, PIRAMID

A logistics company wants to protect its fleet of vehicles (semi-trailers) to avoid malicious acts that lead to their degradation: cutting truck tarpaulins and fuel theft.

CONSTRAINTS TO CONSIDER

The perimeter detection system must not take up space on the interior space of the site intended for the storage of the vehicles in order to avoid the breakage of products during the maneuvers. In addition, each square meter must be exploited, the proposed solution must therefore have a footprint as low as possible.

OUR SOLUTION

- **Shock detection cables: G-FENCE 600Z**
on fencing to detect any attempt to cut, tear, climb, cross.
- **Infrared barriers: BIRIS**
installed above the gate to detect any attempt to cross the top of the gate.
- **Dual technology volumetric detector:**
in addition to BIRIS and to treat this singular point. Its purpose is to protect the intrusion by the portal if it is open in force.
