In order to prevent any attempt at damage or theft, the manager of a car dealership wishes to protect his site and more particularly his outdoor fleet where his new vehicles are stored.

CONSTRAINTS TO TAKE INTO ACCOUNT

The entire surface of the vehicle fleet is used. Many vehicles are installed very close to the fences delimiting the surface of the concession. There is very little room to devote to perimeter protection. The proposed solution must therefore have a small footprint and / or a small footprint so as not to encroach on the vehicle storage space.

OUR SOLUTION

- **Shock detection cables: G-FENCE 600Z**

As the site is surrounded by a new chain-link fence, we proposed to equip it to optimize the perimeter protection of the vehicle fleet. In the end, the choice fell on a discreet shock cable solution that allows the manager to use the alarm information and create precise detection zones to integrate in the future a video doubt raising that will complete the security protocol.
