

MAXIRIS

PIRAMID

The largest Beneteau dealership in France wants to implement a solution to secure its boats and engines of great value.

The site is in perfect condition: the exteriors are maintained and the perimeter fence is new. In order to recommend the most suitable solution, SORHEA team came on site to carry out a site survey. Our sales representative and our service department manager were then able to recommend an ideal security solution for this site.

CONSTRAINTS TO CONSIDER

- High added value of the goods to be protected on site, requiring a high level of security
- High road traffic near the site

MAXIBUS Universal
to centralize alarm information

In order to meet the needs of the customer, our team recommended the installation of:

- **Our 3m MAXIRIS infrared barriers and 8 cells per direction.** They incorporate multiplexing, SORHEA infrared technology, which allows independent cell management and gives our columns unmatched reliability on the market. In addition, the flat terrain of this site guarantees the stability of the columns over time. As for the zoning function, it allows a more effective removal of doubt.
- **Our PIRAMID detector.** To complete the security at the gates, this dual-technology detector has been recommended for range control regardless of sensitivity: it is therefore not disturbed by road traffic outside the site.

The + SORHEA

For a perfect configuration, we provide our customers with a PIRAMID **TUTORIAL** video to illustrate the installation and configuration of the detector.
